

SITE ASSESSMENT PROGRAM

Take a proactive step toward clarity, control, and confidence in future planning

DON'T LET AGING SYSTEMS SLOW YOU DOWN

Facility operations and maintenance managers are under increasing pressure to maintain high system uptime with limited budgets and persistent labor constraints. Unplanned downtime, especially during peak seasons, can cost facilities over hundreds of thousands of dollars annually.

In today's fast-evolving material handling landscape the need for **proactive system health checks and long-term planning** has never been greater.

EVALUATE SYSTEM PERFORMANCE

Dematic's **Site Assessment Program** is a comprehensive service that evaluates system performance, operator interaction, and subsystem functionality. Conducted by highly skilled Dematic engineers, the assessment identifies critical components at risk, uncovers inefficiencies, and provides a roadmap for short and long-term improvements.

What's Included:

- **System Health Check:** Mechanical, controls, software and safety
- **Customized Scope:** Full system or subsystem focus based on your needs or pain points
- **Appraisal Report:** Tailored system analysis and upgrade recommendations
- **Actionable Roadmap:** A 3–5 year plan aligned with your business goals and budget

Let Dematic Optimize Your Facility for the Future.

Benefits and Features

EXPERT ANALYSIS

Dematic engineers work collaboratively to provide a detailed system analysis.

CLEAR VISIBILITY

Detailed analysis into system risks, inefficiencies, and improvement opportunities.

INCREASE THROUGHPUT

Maximize operations with actionable data-driven insights.

REDUCE DOWNTIME

Proactively identify pain points to reduce the risk of unplanned downtime.

SMARTER BUDGETING

Informed decisions with foresight into future needs, costs, and infrastructure changes.
